

GP4 Peer Review Form

Group name: Jbiv / Jivecca Reviewed by: Motiel / Sam

Have the team show you their SQL:

Reservations: Does the query take into account the other reservations that intersect with the requested time frame. Does the price calculation take into account the season and the day of the week?

Yes, price and intersecting reservations handled

Check-in: Does the query for available rooms of a specific type take into account whether or not a room is occupied and whether or not a room is clean? Do the team's assumptions about how occupied/clean data get into their system make sense?

rooms to check into must be clean and unoccupied

Check-out: Does the query include all the information necessary to create a bill - the room(s) price per day, the guest category, and the extra services?

Contains room price, discounted room price, and total amount

Extra Service: Does the query return all the information needed for the user to choose to purchase an extra service?

Yes, query displays all possible options for extra services

Try each of the GUIs available, entering different search data:

- Reservation ✓

- Check-in ✓

- Check-out ✓

- Extra services ✓

Self Assessment

- Have you pushed today's version to github?

Yes, but Q3 is suddenly not working & you cannot click on the results

- Do you have each of the GUIs working? Write the current state of each of the parts using a rough classification:

- **Not started** - you have not started this component
- **Temporary** - you have some code there to get it to run, but nothing like the final code should be
- **Draft** - you have realistic code but it is unfinished
- **Close to final** - it is near to a final state with just a few issues to fix/finish

- **Reservation:**

- SQL: *close to final*
- Functional web interface: *close to final*

- **Check-in:**

- SQL: *close to final*
- Functional web interface: *close to final*

- **Check-out:**

- SQL: *close to final*
- Functional web interface: *close to final*

- **Extra service:**

- SQL: *close to final*
- Functional web interface: *close to final*

Reflection

After hearing comments from your peers and instructor, what areas in your full system do you plan to revise?

- links to click on for Q2 room # ✓
- Parameters for Q2 ✓
- Actually use parameters in Sql function ✓
- 'user' should click something that causes the DB to update - order button
- Today's Date param ✓
